Wilson Connectivity – Cellular Amplifiers

ENTERPRISE 4330

Cellular Signal Amplifiers

Also known as (DAS) – Distributed Antenna Systems take existing cellular signal from a nearby cell tower and amplifies and distributes it through a network of antennas. This eliminates dead zones and improves signal strength.

INDOOR ANTENNAS

- Average \$0.50 sq/ft budget buildings under 200k sq/ft
- 4G & 5G LTE with precise channel optimization
- All devices, all services, all carriers
- Scalable passive, hybrid and active solutions

System Site Surveys, Design, Budgets

SIGNAL DETECT

Cellular Network Scanner

Wilson Connectivity offers various systems to meet all your cellular amplification needs.

- Site surveys available with carrier signal strength meter
- Select tower signal quality, carrier band, frequency
- Complete system design with cable and hardware
- Installation contractor referrals

End To End Solutions
