

XM Monitoring Modules Specifications

Catalog Numbers 1440 Series

The XM® series of intelligent I/O modules process, in real-time, the critical parameters that are used to assess the current health and predict the future health of industrial machinery. This real-time processing provides machinery protection and reduces downtime. Use the XM modules in a standalone system, or integrate them with existing automation and control systems.

XM DYN Dynamic Measurement Module

The XM dynamic measurement module (catalog number 1440-DYN02-01RJ) is a two-channel, general-purpose monitor that supports measurements of dynamic inputs such as vibration, pressure, and strain. You can use the module to monitor shaft, casing, and pedestal vibration in equipment that rotates. The module is designed specifically for integration with ControlLogix® controllers, which are connected through the 1440-ACNR ControlNet adapter.

XM-124 Standard Dynamic Measurement Module

The XM-124 module (catalog number 1440-SDM02-01RA) is a two-channel, general-purpose monitor that supports dynamic measurements such as vibration, pressure, strain, and spike energy (gSE). The module also supports static (DC) thrust and eccentricity measurements.

The XM-124 consolidates and improves on most of the functionality that is provided by the earlier XM-120, XM-120E, XM-121, XM-122 and XM-123 modules. It also provides the same basic, single-channel, thrust measurement as the XM-320 module. The XM-124 is suitable for monitoring almost any rotating machine, including steam turbines, aeroderivative and industrial gas turbines, hydro turbines, motors, pumps, fans, compressors, and gearboxes.

XM-441 Expansion Relay Module

The XM-441 expansion relay (catalog number 1440-REX00-04RD) adds four relays to any XM measurement module or to the XM-440 master relay.

Indicators	
Status indicators	- Module power -green - Relay 1 - red - Relay 2 - red - Relay 3 - red - Relay 4 - red
Communication	
Host communication	The XM-441 module communicates to a host module via the side connector of the terminal base. If the host is an XM-440 master relay module, then you can place two XM-441 modules immediately to the right of the XM-440 module. All XM measurement modules support just one expansion module, which must be connected directly to and on the right of the host module
Relays	
Number	Four relays, two sets of contacts each - DPDT (two Form C)
Contacts	250V AC, 50/60 Hz @ 3 A resistive
Failsafe	- Normally energized (fail-safe) - Normally de-energized (non-failsafe)

Serial Configuration Utility

Use the XM Serial Configuration Utility to commission and configure XM modules. The utility ships with each XM module and can be downloaded from <http://www.rockwellautomation.com/support/>.

From the support website, choose Downloads>Firmware Updates>Condition Monitoring.

Attribute	Serial Configuration Utility
Operating systems	Microsoft Windows: NT, 2000, XP
Computer requirements	- Computer with an available RS-232 serial port Recommended: 400 MHz CPU, 128+ MB RAM, 10 MB free disk space - Almost any up-to-date computer can be used for module configuration. The recommended configuration is suggested for systems that are heavily used or that are used to view live data
Security	Password facility that precludes unauthorized use.
DeviceNet address management	0...63
Additional features	- Auto save configuration - Alarm and relay management - Module firmware update - Store highest tachometer speed with reset
Supported XM modules	- XM-120 standard vibration - XM-120E eccentricity - XM-121 low frequency vibration - XM-121A absolute shaft vibration - XM-122 gSE vibration - XM-123 aeroderivative - XM-124 standard dynamic - XM-160 direct vibration - XM-161 direct vibration with 4...20 mA output - XM-162 direct vibration with eddy current probe power - XM-220 dual speed - XM-320 position - XM-360 process - XM-361 universal temperature - XM-362 thermocouple temperature - XM-440 master relay
Plots	- Spectra - Time waveform - Trend - Level - Alarm and relay status The available plots depend on the module providing the data

Fuse Kit

The fuse kit limits the available current from listed safety extra low voltage or protected extra low voltage (PELV) sources. The kit lets you use safety extra low voltage or PELV supplies as an alternative to a listed Class 2 power source for an XM monitoring system.

Attribute	Fuse Kit (1440-5AFUSEKIT)

Serial Communication Cable

The serial communication cable connects a computer to an XM module for configuration by using the XM Serial Configuration Utility.

Attribute	Communication Cable (1440-SCDB9FXM2)
Length	2 m (6.56 ft)
Connectors	9-pin female serial to micro-USB

ControlNet Adapter

The ControlNet adapter (cat. no. 1440-ACNR) bridges an XM bus network and a ControlNet network. Use only with 1...10 XM dynamic measurement modules (cat. no. DYN02-01RJ).
