

An outstanding choice
when it's important to stand out
... or to *not* stand out

Designer Series Color EMT™

Our galvanized Color EMT meets the same requirements as our standard EMT, and also carries the UL listing and certification. Factory testing and controls make sure it bends without kinking or flattening, and that the zinc galvanized layer doesn't crack or flake. A special polymer ID coating that has low friction is used so that feeding wires is simple and easy. And, of course, both the ID and the OD have uniquely formulated organic coatings that inhibit rust formation.

In addition to our standard red, white, blue, green and black EMT, we are also able to provide custom colors. All the standard colors are stocked in the 3/4" size for quick delivery, and other sizes in any color can also be ordered from our factory. We want to meet your needs. Please contact our Sales representatives for more information on how we can add color to your project or application.

**Make important circuits
stand out immediately**
