One-piece Outlet Box for Siding

with Installed Code-compliant Weatherproof Cover

NEW! more on reverse

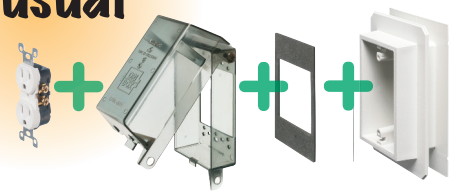

ONE-PIECE F8091

SAVES 2 Minutes over "the usual"

Patented. Other patents pending.

Save time and money with Arlington's cost-effective, one-piece outlet boxes. They're the fast, neat way to install a single-gang device on any siding type – *without the need for extra pieces.*

F8091 boxes install *before* or *after* the siding and *come with* a pre-installed extra-duty, weatherproof cover. For added security they're lockable too!

When installing on existing siding the flanges hide the cut ends of siding.

- Includes plugs for sealing unused cord hole openings against bugs
- Vertical or horizontal with extra-duty clear or paintable white covers

- Meets weatherproof-while-in-use requirements of the NEC, 406.9 (A) and the CEC (Rule 26-702) – Also meets the extra-duty requirements of NEC, 406.9 (B), *where required*
- Easy to install on all siding types
- UV rated, textured, paintable plastic
- cULus Listed

Weatherproof Outlet Box for Siding

NEW!

One-piece for Installing Single-gang Devices on Siding

F8091 series boxes are easy to install *before* or *after* the siding

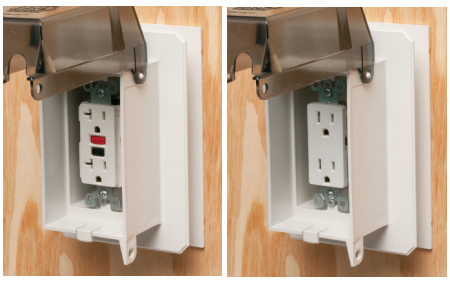

BEFORE the siding is up

1 Disconnect electrical power. Remove knockout and insert supplied cable connector. Pull NM cable through connector.

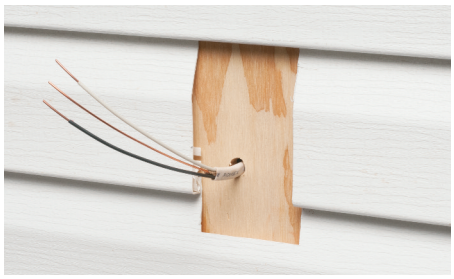

2 Attach box to substrate with screws.

3 Install device, then the cover plate. The F8091 series works with GFCIs and most other single-gang devices. After siding is installed, caulk as required.

SAVE TIME! Pre-installed cover...No extra pieces

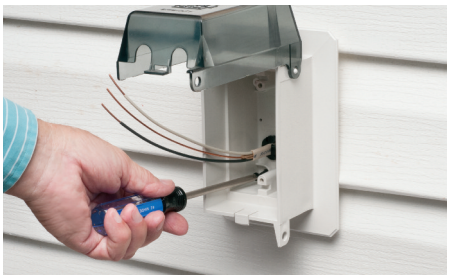

AFTER the siding is up

1 Disconnect electrical power. Cut hole in siding.

2 Break the flanges off of the back of the box. Remove knockout. Insert supplied connector and pull cable.

3 Attach box to substrate with screws. Caulk as required.

4 Install the single-gang device, then the cover plate.
